

# Escape TO LIFE® Opiate Detox (Heroin, Methadone, Morphine)

The outstanding opiate detox method

Escape detox is an integrated health service, offering discrete and personal treatment for opiate addicted individuals to overcome their dependence from the "daily dose". Innovative detox and outpatient follow up programs are designed especially for socially integrated addicts.

International patients welcome.

We are professionally dedicated to the message that **opiate dependence can be treated and healed**.

**We offer rapid and comfortable escape opiate - detox - treatment for heroin and methadone (and opioids of any kind) addicted individuals in a discrete and personal way (Monday - Friday).**

The escape detox protocol is based on the latest medical technology, enabling **direct stimulation of the brain and its ability to produce its own endogenous opiates, endorphines** (This is **not** invasive ( **no** anesthesia or intensive care needed). The findings of our ongoing research on neurophysical patterns of the detox- and recovery process are implemented to deliver best results in opiate withdrawal. The escape detox protocol reduce withdrawal symptoms to an acceptable level i.e. it allows the patient to sleep frequently during the short detox process. Beside the efficient compensation of symptoms, recovery time is reduced dramatically, so if the detox begins on Monday, one can return home or go for a holiday on Friday in a fairly good condition. Our wide experience in psychodynamics of opiate detox helps the individual to welcome the clean world.

The escape method is efficient and inexpensive. **The total cost of treatment, everything included for five days in our International Escape Detox Centre is CHF 3 100.-- | EUR 2 200.--.** Are you looking for an easy way to overcome your opiate dependency? Then contact our admission by [e-mail](#).

## [Escape easy detox: License information for professionals in European Countries](#)

You are a passionate professional in the field of addiction treatment, engaged in helping people lose their dependency, looking for efficient ways and motivated to try something new..... maybe the following information is of interest for you.

***The Escape detox is based on the effects of stimulation of neurotransmitters directly in the brain. The related escape detox protocols offer a very comfortable way to manage opiate withdrawal. The know how and technical equipment is available on licence.***

### Introduction to Escape

My name is [André Stucki](#), I`ve worked for decades in many functions with people addicted mainly from hard drugs. Over the years, regarding the seriousness of the problem overcoming an addiction, it was a challenge from everyday work to try to find more efficient

ways of supporting the process of attaining freedom from addiction. In 1996, after some years building up and running residential treatment centers and a detox clinic, the questions on how to react to the changes in addiction treatment found new answers. The decision was made to build an outpatients treatment system (for socially integrated opiate addicts who wish to get rid of their problem) which should meet two main goals:

- to reduce symptoms of opiate detox as much as possible, provide optimal support in handling the complex physical and emotional withdrawal situation and implement the results of medical and neurophysiological research in detox and treatment process.
- to offer treatment (including detox) at a price, that is affordable for most integrated addicts. (On a monthly base it is cheaper than addiction anyway, but on a yearly base also cheaper than substitution. This turned out to be a political issue – see article in the "Tages Anzeiger", a big Swiss newspaper (sorry, German only). [Tagesanzeiger pdf](#)

The research leads to a very efficient way to detox. The process is supported directly by stimulation of endorphine production in the brain, a phenomenon that was first described by Dr. Patterson in the late seventies. For this purpose, we developed a stimulation device named "Neuro Jet VIII".

Following the testing and [scientific evaluation](#) of the effects of stimulation to the human brain undergoing an opiate detox, we learned how to tune the stimulation for maximum results.

Then we found ways to overdrive the limitations (only specific receptor systems are affected) of this approach with adequate medication.

The Escape detox protocol sets a new standard, the detox process has been judged by the clients with very appreciative words. With over 1000 treatments in Switzerland (Methadone, Heroin, Opioids) the method is clinically tested and the "Neuro Jet" technology meanwhile a certified medical device. "Neuro Jet" technology alone reduces withdrawal symptoms by at least 50%. Furthermore the stimulation acts like a pacemaker to the brain with fast recovery resulting.

The services in our institution run under the strict quality management rules of ISO 9001-2008.

The out-patient follow-up programs after detox offer treatment to overcome addiction behavior. If indicated, we use "Naltrexon HCL" as a support to prevent relapses. If such compulsive behavior occurs, we offer relapse management to avoid new reinforcement of old conditioning. Beside the treatment of Heroin addiction, for those who suffer from long term methadone addiction, the benefits are enormous. For this "age-old problem" of thousands of methadone dependents in many countries with little perspective of overcoming this chronic problem, escape outpatient treatment programs offer a safe way to rehabilitation.

#### Our aim:

- to spread the awareness of an existing Escape "State of the Art" detox protocol for the benefit of all those suffering from no or inadequate treatment of opiate withdrawal.

#### Espanol:

[Escape: Más de 1.000 desintoxicaciones con éxito de la adicción a opiáceos](#)

#### Deutsch:

[Bereits über 1000 erfolgreiche Opiatentzüge dank neuroelektrischem "escape" Stimulationsverfahren](#)

- to establish this new treatment technique for heroin-, methadone- and opioid- addicts by supporting professionals to create their own treatment possibilities.

#### Our offer:

- to analyse and discuss the specific requirements of your environment and develop a model to integrate Escape detox technology.
- to come to a joint conclusion whereby cooperation can bring benefits and happiness to all involved.

Licensed agreement (One time down-payment, moderate monthly fee, terms and conditions upon request) including:

A one week stay in our out-patients centre to provide the know-how transfer and to learn how to use Escape detox protocols and Neuro-Jet devices.

Escape Detox for two of your clients during this week.

Use of Neuro-Jet devices at your place, including service and repair. (Equipment is not available to the general public)

Ongoing knowledge update regarding medical or technical improvements connected to detox or addiction treatment.

Restrictive license policy. Only one Escape Detox licence in every European country guarantees a high standard of the brand and helps to make your project a succes.

To assure quality standards, only one individual can obtain a license (or a small team, if the requirements of medical and psychosocial knowledge make it necessary).

If this information was of interest for you, we look forward to hearing from you at your earliest convenience.
